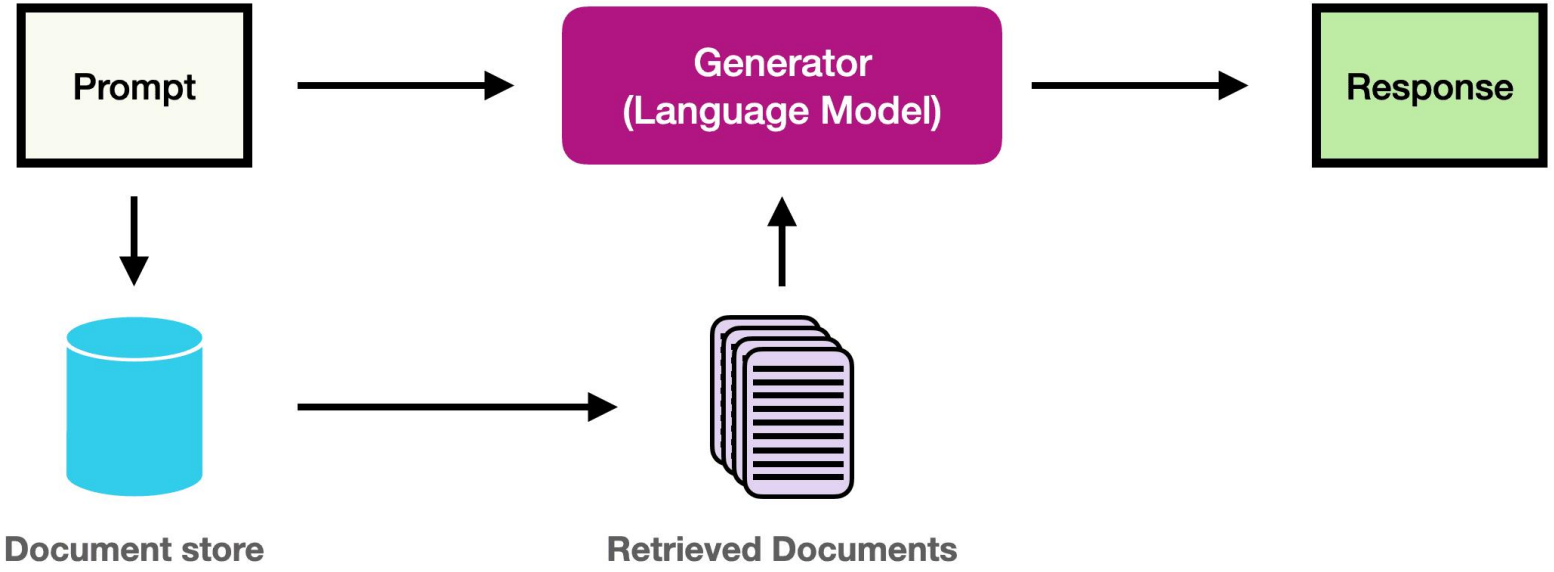
# Tutorial–– RAG

- How to use Generative AI?
  - RAG (GPT + external data --> output)
    1. User has a query/prompt, e.g., *When is the final exam for COMPSCI 714*
    2. We have a set of documents, e.g., large-scale documents for UoA
    3. Retrieval
    4. Generation



# Retrieval

- Query --> Encoder --> Feature (e.g., vector)
- Documents --> Encoder --> Features (e.g., lots of vectors)
